- Project Description
- Conclusion

Introduction

This project is a web based shopping system for an existing shop. This project is an attempt to provide the advantages of online shopping to customers of a real shop. It helps buying the products in the shop anywhere through internet by using an android device. Thus the customer will get the service of online shopping and home delivery from his favorite shop. This system can be implemented to any shop in the locality or to multinational branded shops having retail outlet chains.

Problem Definition

- It takes a lot of time to go into a store and try finding your way around the big supermarket;
- sometimes it can get worse when the store is not properly sectioned.
- It is obvious that it will take a significantly shorter time to order for goods and services online than to move from one supermarket to the other trying to get things.
- This is so different from going to the supermarket to buy things, most times, you have to get on a queue just to make payment and this can be stressful.

there are limited options. Some limited to the products in that specific vicinity or community, some other ones to the goods being produced in that state and the lucky ones get to display the goods produced within the country.

Before making your purchase there is the option where you can read up the reviews given by other buyers that have used the product.

Problem Solution

SAVE YOUR TIME

LESS STRESSFUL

**MANY VARIETIES TO
SELECT FROM**

**MORE BONUSES AND
DISCOUNT DEALS OR
COUPONS**

**EASIER TO RETURN
GOODS AND CANCEL
ORDERS**

NO ONE HAS TO KNOW

**EASIER TO SEND GOODS
TO DISTANT PLACES**

Tools & Technology

- Tools:-
 - **Sublime Text/Vs Code** - Code Editor.
 - Xampp server - xampp server is a windows web development environment.its allows you to create web application with Apache,PHP and the mySQL database.its also come with phpmyadmin to easily manage your database.xampp server installs automatically (installer).and its uses is very intuitive.

Sublime Text

XAMPP

Visual Studio Code

Technology

- ◆ **Laravel**: **Laravel** is a free, open-source PHP web framework, created by Taylor Otwell and intended for the development of web applications following the model–view–controller (MVC) architectural pattern and based on Symfony. Some of the features of Laravel are a modular packaging system with a dedicated dependency manager, different ways for accessing relational databases, utilities that aid in application deployment and maintenance, and its orientation toward syntactic sugar.
- ◆ **MySQL** - mysql (database) is an open source database . MySQL is a most popular database system used with PHP.

Front end Technology

- **HTML** : html is used to create and save web document .
- **CSS** : **css** (cascading style sheets) create attractive layouts and affective design.
- **JavaScript** : Its programming language . commonly use with web browsers.
- **Hardware Requirement** : Basic Computer System.

Back end Technology

- ❑ **Laravel:** - Laravel is a technology that allows software developers to create a dynamically generated web pages in html , xml or other document types , as per client request.
- ❑ **MySQL:** mysql is a database widely used accessing querying , updating , managing data in databases.
- ◆ **Software Requirement :** -
 - ❑ Xampp

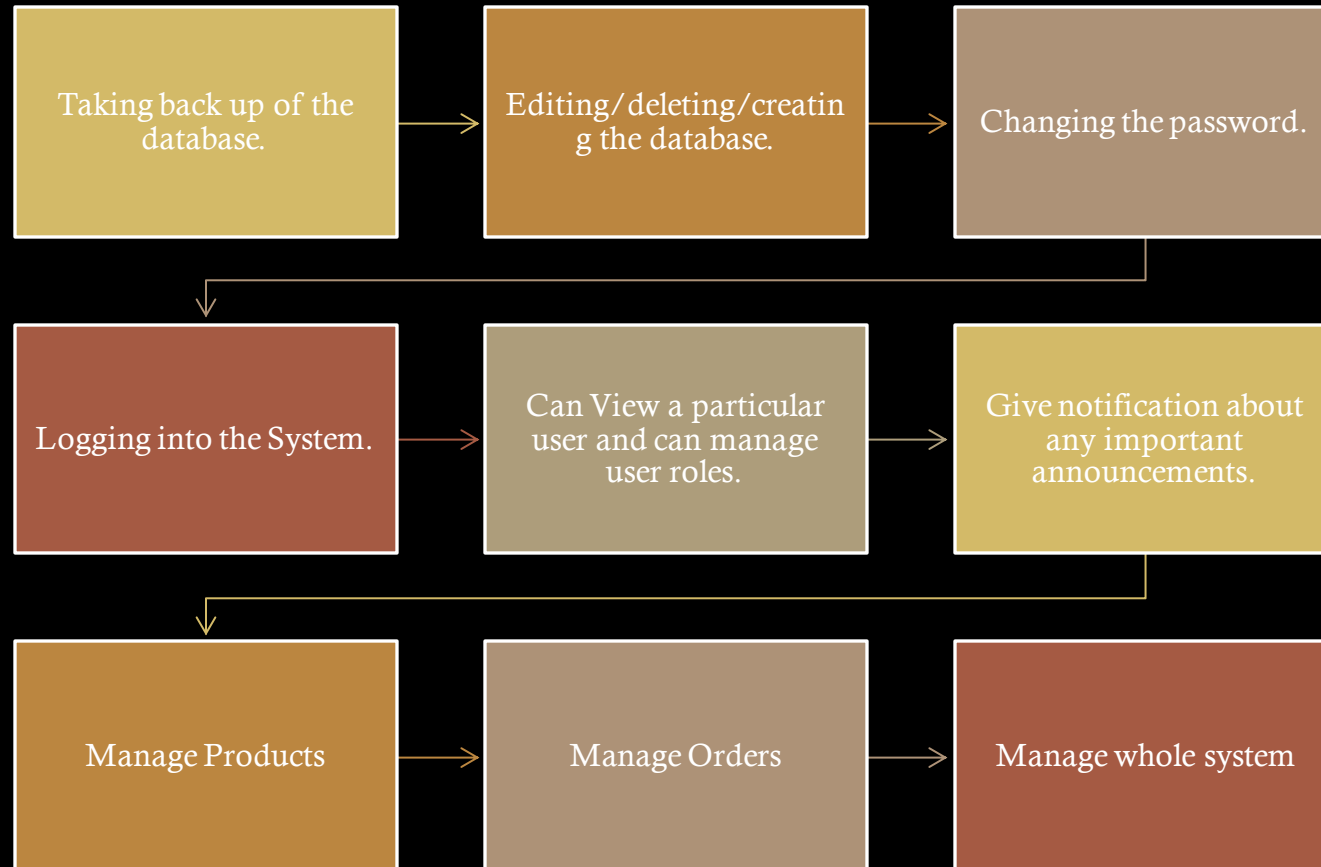

Project Description

The project will complete in three modules which are as follow : -

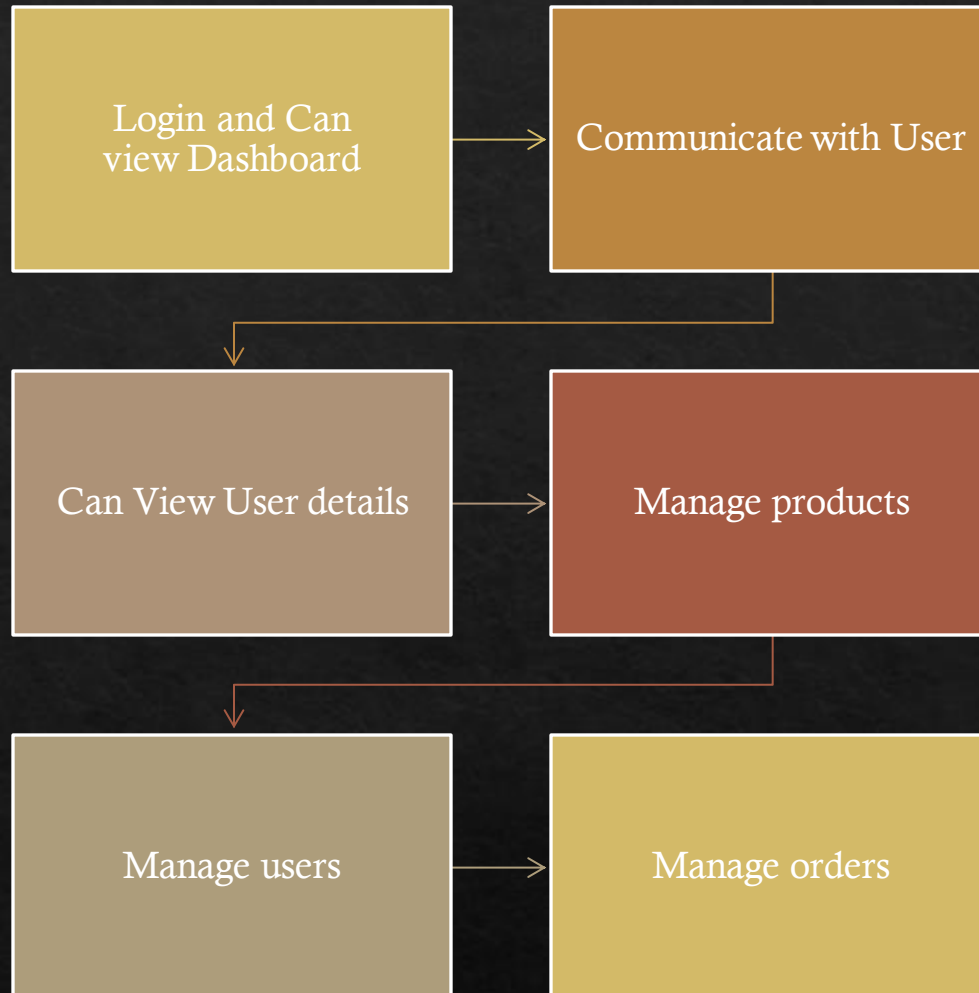

E-Shop

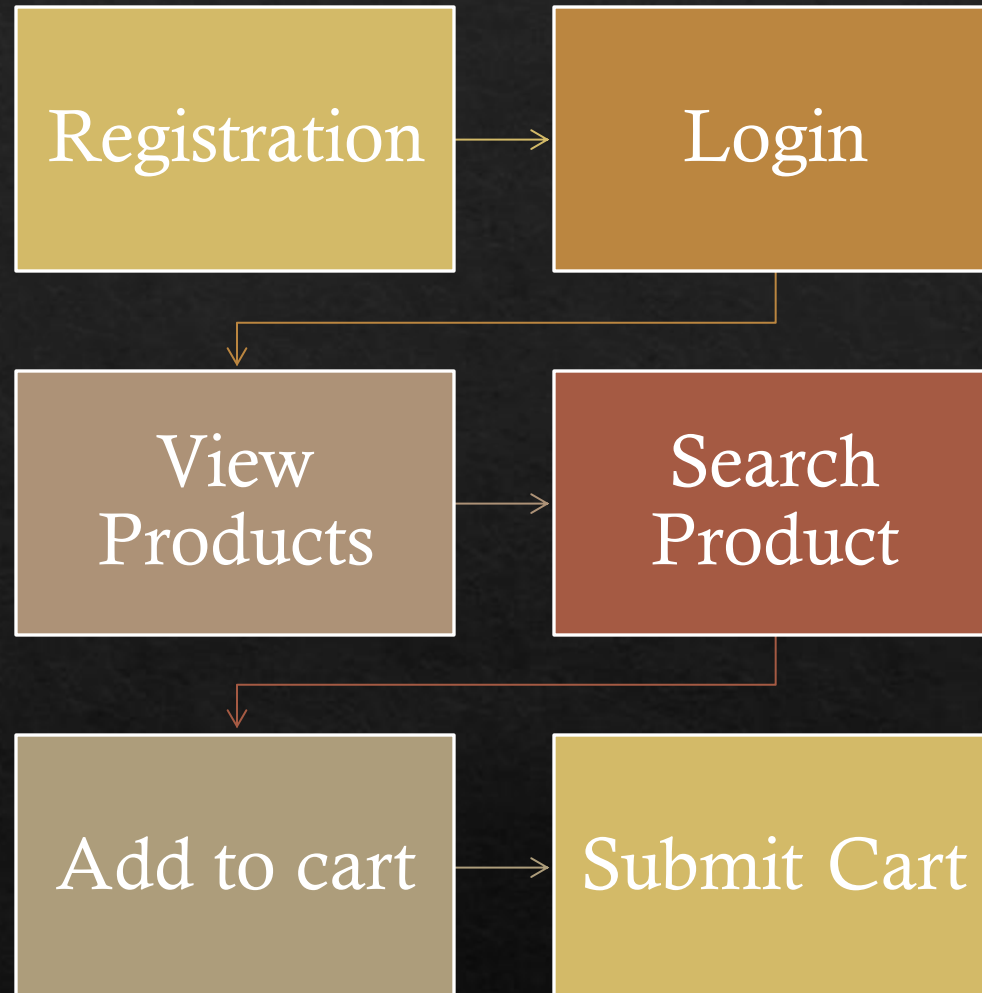

- **Admin**
- **Moderator**
- **User**

Conclusion

This project has given us great satisfaction in having designed an application which can be implemented to any nearby shops or branded shops selling various kinds of products by simple modifications

THANK
YOU

Thanks to you all for give opportunity to represent
my project presentation in front of you all.
